Special Issue

Ionizing Radiation and Genetic Risks

by K. Sankaranarayanan

Editorial Introduction F.H. Sobels (The Netherlands)	1
<i>Reviews</i>	
Ionizing radiation and genetic risks.	
I. Epidemiological, population genetic, biochemical and molecular aspects of Mendelian diseases K. Sankaranarayanan (The Netherlands)	3
Ionizing radiation and genetic risks.	
II. Nature of radiation-induced mutations in experimental mammalian in vivo systems K. Sankaranarayanan (The Netherlands)	51
Ionizing radiation and genetic risks.	
III. Nature of spontaneous and radiation-induced mutations in mammalian in vitro systems and mechanisms of induction of mutations by radiation K. Sankaranarayanan (The Netherlands)	75
Ionizing radiation and genetic risks.	
IV. Current methods, estimates of risk of Mendelian disease, human data and lessons from biochemical and molecular studies of mutations K. Sankaranarayanan (The Netherlands)	99
[end of special issue]	
The genetic toxicology of acridines L.R. Ferguson and W.A. Denny (New Zealand)	123
The genetic toxicology of 5-bromodeoxyuridine in mammalian cells S.M. Morris (U.S.A.)	161
<i>Editorial</i> F.H. Sobels (The Netherlands)	189
<i>Reviews</i>	
Biological low-dose radiation effects P. Oftedal (Norway)	191
The genetic toxicology of <i>ortho</i> -toluidine N. Danford (U.K.)	207
The detection of chemically induced chromosomal malsegregation in <i>Saccharomyces cerevisiae</i> D61.M: a literature survey (1984-1990) S. Albertini and F.K. Zimmermann (Switzerland, F.R.G.)	237
Considerations in the U.S. Environmental Protection Agency's testing approach for mutagenicity K.L. Dearfield, A.E. Auletta, M.C. Cimino and M.M. Moore (U.S.A.)	259
Genotoxic, carcinogenic, and teratogenic hazards in the marine environment, with special reference to the Mediterranean Sea S. De Flora, M. Bagnasco and P. Zanacchi (Italy)	285
Contents, Vol. 258 (1991)	321
